TechInfo-023 PROGuard V5.4

Summary:
On September 30th 2015 Contronics presented PROGuard release V5.4 which is available for downloading on Contronics web pages www.contronics.com on session "support.

PROGuard V5.4 new features
PROGuard V5.4 brings new firmware for some Guardus wand models:
- Guardus G3-V9 and Guardus G3-V9-L: new firmware V5.5
- Guardus G7-V9: new firmware V4.0

When one of such wands are communicating with PROGuard V5.4, even downloading or setting up a new tour program, a screen will pop up suggestion to upgrade their firmware to the new version.

Contronics strongly encourages you to update firmware to new version. There is no risks of loosing information on such procedure since all instructions shown on the screen are followed.

New firmware has the following advantages over the previous version:
- Increase battery life roughly 5%
- Speed up processing roughly 10%
- Decrease electric stress of some internal components, leading to an even higher reliability and prolonging life time.

In addition, PROGuard V5.4 shows the serial number, hardware and firmware version of PnP USB Cables which are connected to the USB port during a download or programming procedure. Such information is useful in case, for any reason, you need technical support.
